SUMMARY

Computer Science (Design) undergraduate with backend and full-stack development experience in Java, Python, and Spring Boot. Built a production RAG-based semantic search system during a software engineering internship at Zoho, and have hands-on exposure to REST API design, embeddings, and AI-integrated applications. Strong DSA foundation (500+ LeetCode problems) and a track record of independently building and shipping full-stack projects.

TECHNICAL SKILLS

Languages: Java, Python, SQL, JavaScript, C
Backend & APIs: Spring Boot, RESTful API Design
Web Technologies: React, HTML, CSS, JavaScript
Databases: PostgreSQL, SQL, Qdrant (Vector DB)
AI / ML: Retrieval-Augmented Generation (RAG), Sentence Transformers, Semantic Search
Core CS & Tools: Data Structures & Algorithms, OOP, Git, JWT Authentication, Agile/Scrum, Figma

EXPERIENCE

Zoho Corporation — Software Engineering Summer Intern
• Built a RAG-based natural-language query assistant for internal API information, processing OpenAPI/YAML specifications into structured data for downstream retrieval.
• Generated natural-language questions, SQL queries, and descriptions from API specifications to support semantic search over API/SQL information.
• Built a semantic search pipeline using Sentence Transformers (all-MiniLM-L6-v2) to generate embeddings, and indexed them in a Qdrant vector database for similarity retrieval.
• Implemented Retrieval-Augmented Generation (RAG) to map natural-language queries to relevant API and SQL information.
• Worked on API dependency mapping between parameterized and non-parameterized APIs, and parsed large YAML specifications into structured JSON/table representations.
• Built an API dependency visualization/tree interface using HTML/CSS with a Python parsing script, and worked with Open WebUI and related AI tooling.

PROJECTS

PHC AI Companion | *Spring Boot, React, PostgreSQL, JWT, REST APIs, AI*
• Built a full-stack AI-assisted Primary Healthcare Management System with secure, role-based access control for receptionists, nurses, and doctors.
• Designed patient record, consultation, vitals, and prescription modules within a centralized Electronic Health Record (EHR).
• Integrated AI-powered patient history summarization to generate concise visit summaries from prior prescriptions, nurse notes, and vitals.
• Designed relational database schema and REST APIs to manage end-to-end healthcare workflows and patient data.

AI-Powered VR Mock Interview Platform | *Unity, Convai, AI Integration*
• Developed an AR/VR-based mock interview platform to help students prepare for placement interviews through immersive interview practice.
• Built the immersive interview environment in Unity and integrated Convai to power an AI interviewer capable of conversational, interview-style interaction.
• Designed the experience around realistic interview practice, communication, and confidence-building, with personalized feedback.

EDUCATION

Rajalakshmi Engineering College | B.E. Computer Science and Design | CGPA: 8.65 (Semester 3) | 08/2024 – 05/2028
Modern Senior Secondary School — Class XII: 94.6% (2023–2024) | Class X: 96.8% (2021–2022)

ACHIEVEMENTS

• **3rd Place — TCS AI Hackathon**, for building an AI-driven solution under competitive time constraints.
• **Solved 500+ problems on LeetCode**, strengthening data structures, algorithms, and problem-solving skills.
• **5-star rating in Python** on HackerRank.
• **Earned HackerRank certifications** in Python (Basic) and SQL.
